

# TEdit Dorado Keys

*A set of convenience keys for the Dorado and TEdit.*

## INTERNAL

This package defines a number of meta-keystrokes as TEdit commands, providing much of the functionality of the 1186's expanded keyboard. An effort was made to keep the command set compatible with SEdit's for similar functions.

In a number of cases, the meta-lower-case and meta-upper-case commands are different--typically, the lower-case command turns some attribute (like boldness) on, and the upper-case command turns it off.

Here's the set of defined functions:

<b>meta-u</b>	
<b>meta-U</b>	UNDO
<b>meta-f</b>	
<b>meta-F</b>	FIND
<b>metaa</b>	
<b>meta-A</b>	ABORT (i.e., do a GET)
<b>meta-s</b>	
<b>meta-S</b>	SUBSTITUTE
<b>ESC</b>	REDO (note that this changes the default definition, which is EXPAND)
<b>meta-x</b>	
<b>meta-X</b>	EXPAND (also on control-X)
<b>meta-n</b>	
<b>meta-N</b>	Move to NEXT fill-in blank
<b>meta-c</b>	
<b>meta-C</b>	Change margins, rotating thru centered, left, right, just.
<b>meta-b</b>	Turn BOLD on
<b>meta-B</b>	Turn BOLD off
<b>meta-i</b>	Turn ITALIC on
<b>meta-I</b>	Turn ITALIC off
<b>meta-=</b>	Turn strike-thru on
<b>meta-+</b>	Turn strike-thru off
<b>meta--</b>	Turn underline on
<b>meta-<u></u></b>	Turn underline off
<b>meta-^</b>	Superscript (or de-superscript)
<b>meta- </b>	Subscript (or de-superscript)
<b>meta-space</b>	Return to default font/weight/slope/etc.
<b>meta-?</b>	Show current font in prompt window.
<b>meta-(</b>	Insert parentheses around the current selection
<b>meta-"</b>	Insert neutral double quotes (ASCII ") around the current selection
<b>meta-'</b>	Insert real double quotes (" and ") around the current selection
