
PS-PATCH

By: Will Snow (snow.envos@xerox.com)

Requires: POSTSCRIPT

This module fixes some bugs in software other than postscript. If you are going to load sketch, load it BEFORE you load this patch. If you load sketch after loading this patch, evaluate the following form in an Interlisp Executive:

```
(MOVD (QUOTE NEW-SK-PICK-FONT) (QUOTE SK.PICK.FONT) NIL T)
```

This will make the printing of sketches with text in them reasonable.
