Xerox Lisp includes utilities for generating hardcopy in "Press" format. This is a file format for communicating documents to Xerox laser xerographic printers of the Press, Spruce or Fullpress class, which are known by the names Dover, Penguin, Raven and Spruce.

Note: Press, along with other classes of printers, is described fully in two sections in the IRM, "Hardcopy Facilities" and "Fonts."

The reason for putting this document into the *Lisp Library Modules Manual* is that support of these printers is no longer an integral part of the system.

# Requirements

FONTS.WIDTHS

PUPPRINT.LCOM

A Press print server

## Installation

Load PRESS. LCOM from the library.

Set the variable PRESSFONTWIDTHFILES (see below).

#### **User Interface**

You can use the usual means:

- HARDCOPY in background (right-button) menu
- HARDCOPY in FileBrowser menu
- Functions typed into the exec window (see below)

## **Functions**

DEFAULTPRINTINGHOST PRESSFONTWIDTHFILES SEND.FILE.TO.PRINTER LISTFILES

[Variable]

[Variable]

[Function]

[Function]

(For details about all the above, see the IRM.)

## Limitations

PRESS does not support NS characters or NS fonts.
